

Course Competency

MLT 1196 LAB SAFETY & REG

Course Description

This course will introduce students to the rules and regulations governing safety in the histotechnology laboratory. It will also introduce students to the federal regulations pertaining to the histotechnology laboratory and methods of compliance. Prominent safety issues to be covered included the biological and chemical hazards in the histology laboratory, formaldehyde standards, hazardous waste disposal and minimization. (2 hr. lecture)

| Course Competency | Learning Outcomes |
|--|--|
| Competency 1: The student will demonstrate knowledge, comprehension of laboratory safety by: | Communication Critical thinking Ethical Issues |
| Practicing acceptable laboratory safety such as hand-washing, and Universal precautions Following institutional policies and procedures related to laboratory safety Identifying laboratory safety procedures for working with hazardous materials and methods of disposal Describing possible chemical, biological, and mechanical hazards associated with the histology laboratory. Describing toxic chemicals used in the histology laboratory. Evaluating specific hazards associated with toxic chemicals in the histology laboratory. Describing the use of MSDS sheets. | |
| Competency 2: The student will demonstrate knowledge and comprehension issues of | |
| compliance with federal and state regulations by: | |

- 1. Explaining the Right To Know law and how it pertains to the histology lab.
- 2. Describing the use of a chemical hygiene plan
- 3. Listing OSHA regulations
- 4. Listing HIPAA regulations
- 5. Outlining rules and regulations governing blood-borne pathogens
- 6. Outlining rules and regulations concerning medical errors
- 7. Outlining rules and regulations concerning fire and hazard material safety in the histology laboratory
- 8. Outlining the rules governing universal precautions
- 9. Outlining rules and regulations governing CLIA, Joint Commission, AHCA, CAP thru the use of web sites
