

# Course Competency

## RET 2414L Pulmonary Studies Laboratory

### Course Description

Laboratory for RET 2414. Simulated clinical settings of diagnostic techniques used to evaluate pulmonary functions. Laboratory fee. (2 hr. lab)

Course Competency	Learning Outcomes
<p><b>Competency 1:</b> The student will identify indications for Pulmonary Function Testing by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Categorizing pulmonary function test according to specific purposes</li> <li>2. Listing indications for spirometry, lung volumes, and diffusing capacity</li> <li>3. Listing one obstructive and one restrictive pulmonary disorder</li> <li>4. Relating pulmonary history to indication for performing pulmonary function tests</li> <li>5. Identifying three indications for exercise testing</li> <li>6. Naming at least two diseases in which air trapping may occur</li> </ol>	
<p><b>Competency 2:</b> The student will perform and interpret spirometry and spirometry related tests by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Demonstrating the calibration of a spirometer using a 3 Liter syringe</li> <li>2. Demonstrating the use of a hand-held spirometer to measure FVC, FEV1, FEV1/</li> </ol>	

<p>FVC</p> <ol style="list-style-type: none"> <li>3. Determining whether spirometry is acceptable and repeatable</li> <li>4. Identifying airway obstruction using forced vital capacity (FVC) and forced expiratory volume (FEV1)</li> <li>5. Differentiating between obstruction and restriction as causes of reduced vital capacity</li> <li>6. Determining whether there is a significant response to bronchodilators</li> <li>7. Selecting the appropriate FVC and FEV1 for reporting from a series of spirometry maneuvers</li> <li>8. Identifying at least two pathophysiologic conditions in which maximal inspiratory or expiratory pressures might be abnormal</li> <li>9. Demonstrating the use of a respiratory monometer to performing MIP/MEP and interpreting results</li> <li>10. Recognizing abnormal values for airway resistance and specific conductance</li> <li>11. Performing Peak Flow measurements</li> </ol>	
<p><b>Competency 3:</b> The student will interpret Lung Volume Testing by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Identifying the various components of the various circuits / testing equipment that are used for lung volume / gas distribution testing</li> <li>2. Stating how different types of gas analyzers are used in the pulmonary function laboratory, problems encountered with their use, and how they are calibrated</li> <li>3. Describing the basic components of the body plethysmograph and the instruments used to calibrate it</li> <li>4. Describing the measurement of lung volume gas dilution/ washout methods</li> <li>5. Explaining two advantages of measuring</li> </ol>	

<p>lung volumes using the body plethysmograph</p> <ol style="list-style-type: none"> <li>6. Calculating residual volume and total lung capacity from FRC and the subdivisions of VC</li> <li>7. Identifying a restricted disease process from measured lung volumes</li> <li>8. Describing the correct technique for measuring thoracic gas volumes</li> <li>9. Identifying air trapping and hyperinflation using measured lung volumes</li> </ol>	
<p><b>Competency 4:</b> The student will interpret Diffusing Capacity Measurements by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Identifying the various components of the circuit used to performing DLCOsb</li> <li>2. Stating how different types of gas analyzers are used in the DLCOsb circuit, problems encountered with their use, and how they are calibrated</li> <li>3. Identifying the steps for performing the single-breath DLCO test</li> <li>4. Listing at least two criteria for an acceptable single-breath DLCO test</li> <li>5. Describing why DLCO is often reduced in emphysema</li> <li>6. Describing at least two non-pulmonary causes for a reduced DLCO</li> <li>7. Explaining the significance of a reduced DL/VA</li> </ol>	
<p><b>Competency 5:</b> The student will interpret ventilation and ventilatory control tests by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Identifying the various components of the</li> </ol>	

<p>circuit / testing equipment that are used for ventilation and ventilation control testing</p> <ol style="list-style-type: none"> <li>2. Describing the measurement of tidal volume and minute ventilation</li> <li>3. Identifying at least two causes of decreased minute ventilation</li> <li>4. Calculating the VD/VT ratio using PaCO<sub>2</sub> and PETCO<sub>2</sub></li> <li>5. Listing at least two causes for an increased VD/VT ratio</li> <li>6. Explaining the function of a variable CO<sub>2</sub> scrubber in a circuit for measuring ventilatory response to hypoxia</li> <li>7. Identifying the normal ventilatory response to carbon dioxide</li> </ol>	
<p><b>Competency 6:</b> The student will demonstrate and evaluate the interpreting of blood gases and related tests by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Identifying the various components of a blood gas analyzer and other testing equipment used for blood gas analysis, capnography and pulse oximetry</li> <li>2. Explaining the common causes of blood gas electrode problems</li> <li>3. Describing how pH and PCO<sub>2</sub> are used to demonstrating the assessment of acid-base status</li> <li>4. Interpreting PO<sub>2</sub> and oxygen saturation to demonstrating the assessment of oxygenation</li> <li>5. Describing and performing the appropriate procedure for obtaining an arterial blood gas specimen</li> <li>6. Describing how QC is to be performed on blood gas analyzers and interpreting Levy-Jennings QC graphs for In-Control, Out-of-Control, Trending, Random Error</li> <li>7. Describing at least two limitations of pulse oximetry</li> <li>8. Describing some of the common problems</li> </ol>	

<p>associated with the use of capnographs and how to troubleshoot them</p>	
<p><b>Competency 7:</b> The student will be able to identify outcomes related to cardiopulmonary Exercise Testing by:</p>	<ol style="list-style-type: none"> <li>1. Communication</li> <li>2. Numbers / Data</li> <li>3. Critical thinking</li> <li>4. Information Literacy</li> <li>5. Computer / Technology Usage</li> </ol>
<ol style="list-style-type: none"> <li>1. Identifying indications related to cardiopulmonary exercise testing</li> <li>2. Selecting appropriate protocol related to cardiopulmonary exercise testing</li> <li>3. Evaluating the outcomes related to cardiopulmonary exercise testing</li> </ol>	

Updated: FALL TERM 2022
