## Simulator Name: MetiMan

**Simulator Type:** MetiMan, Fully wireless

### Vital Signs:
- Heart rate
- Respiratory rate
- Blood Pressure
- Pulses
- Temperature cannot be taken on simulator but can be displayed on monitor if relevant to the scenario

### Physical Assessment:
- Voice
- Pulses: are touch activated
  - Bilateral carotid
  - Bilateral brachial
  - Bilateral radial
  - Bilateral femoral
  - Bilateral popliteal
  - Bilateral dorsalis pedal
  - Posterior tibial
- Heart Sounds
  - Aortic area
  - Pulmonary area
  - Tricuspid area
  - Mitral area
- Breath sounds on upper and lower pulmonary areas
  - Normal vesicular sounds
  - Crackles
  - Wheezes
  - Diminished
  - Gurgling
  - Pleural rub
  - Rhonchi
- Blood pressure
- Reactive eyes with automatic and manual, consensual and independent papillary response and control, blinking eyes, variable pupil size
- Bilateral chest movement, Intercostal palpable ribs, flail chest, Pneumothorax decompression, Independent chest excursion
- Bowel sounds on four quadrants
- Realistic airway, break away teeth, trismus, trachea with realistic anatomical landmarks
- Realistic skin, cyanosis, capillary refill (Thumbs)
- Convulsions

### Skills:
- Cardiac and pulmonary auscultation
- Blood pressure assessment
- Pulse palpation
- Bilateral IV port for IV access
- Chest compressions
- Central Venous catheter (subclavian) unilateral
- Nasogastric tube placement
- Tracheostomy tube placement
- 5 Lead ECG, defibrillation, pacing
- Intubation
- Dressings (Must be adhered to simulator with special “Mepitac” tape)

### Enhance Your Experience:
- Realistic secretion: Eyes, nose, mouth
- Two simultaneous bleeding sites
- Urinary output for indwelling urinary catheter
- Interchangeable female and male genitalia
  - Note: the setting up of those features requires at least one hour preparation

### Important Information:
- Keep excessive care when moving to protect internal circuit and mechanics
- Keep ink, marking materials, printed materials away from the skin
