### Area of Emphasis: Physical Plant: Access to Programs

**PRIORITY:** Identify high growth areas where land acquisition is needed for future development, and where the College does not now have accessible, permanent educational facilities. Continue the ongoing efforts to maintain the current facilities in excellent condition.

**GOALS:**
- Establish priorities to acquire land for future development in high growth areas;
- Ensure that existing facilities are maintained in excellent condition;
- Add new facilities as called for in the Capital Improvement Plan.

Assigned to: Task Force; College Facilities Committee

### BACKGROUND:

With six campuses and two major outreach centers, College programs are reasonably accessible to most of the residents of Miami-Dade County. Nevertheless, in terms of the travel time within the county, programs offered at only one or two campuses have become less accessible.

As the population density increases, it is important that the College plan permanent educational sites in high-growth areas. The College should also continue to ensure that current facilities are maintained and renovated to ensure their long life.
